Monthly Sales Report

1. Executive Summary

Sales in March 2026 increased 12% month-over-month. Growth in the cloud services division was particularly notable, with new contract volume reaching an all-time high. A detailed analysis of each division follows.

Company-wide cost optimization efforts have also improved operating margins. We will continue strengthening cross-divisional collaboration to meet Q4 targets.

2. Divisional Sales Analysis

The cloud services division achieved 35% year-over-year growth, driven primarily by three large enterprise contracts signed during the period.

The consulting division maintained steady growth with a 92% client retention rate. Seminar-based lead generation initiatives have been effective in acquiring new clients.

The license sales division is accelerating its transition to a subscription model in response to shifting market conditions. While this creates short-term revenue structure changes, it is expected to stabilize ARR over the medium to long term.

3. Key Performance Indicators

Monthly active users reached 45,000, an 8% increase from the previous month. The Net Promoter Score (NPS) stands at 72 points, well above the industry average.

Churn rate improved to 1.2%, reflecting the customer success team's ongoing efforts. The LTV/CAC ratio remains healthy at 4.8x.

Service uptime reached 99.97%, exceeding SLA targets. Median incident response time was reduced to 15 minutes.

4. Outlook

AI feature integration will accelerate in Q2. Beta testing is already underway with positive initial feedback, and a general release is planned for May.

International expansion continues with the Singapore office opening in April, marking our full-scale entry into the APAC market. Partnership frameworks with local partners are nearing completion.

On the technology investment front, design work on the next-generation platform has begun. A phased migration to microservices architecture is planned, with core component migration targeted for completion by end of 2026.

5. Risks and Mitigation

Currency fluctuation risk has been addressed by strengthening our hedging strategy and increasing the proportion of forward contracts. Multi-currency pricing has also been introduced to minimize client impact.

On the talent acquisition front, competition in the engineering hiring market remains intense. However, enhanced referral programs and expanded remote work policies have helped us reach 80% of our hiring targets.

On the security front, SOC 2 Type II certification renewal has been completed, and preparations for ISMAP registration are underway. Regular vulnerability assessments have maintained a zero critical incident record.
